

AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph beginning on page 1, line 13 as follows:

G-1-P is mainly obtained by phosphorolysis of starch or dextrin with maltodextrin phospholylase (MDPase), and a process making use of MDPase derived from potato (Japanese Patent Publication No. ~~95492/1994~~ 95942/1994) and the so-called enzymatic process using MDPase derived from microorganisms have been reported to date.
